

Berwin Gan

wqg203@nyu.edu • +6014-7544-364 • <https://berwingan.github.io>

EDUCATION

New York University, New York, NY

May 2021

Bachelor of Science in Computer Science, Minor in Sound and Music Computing

GPA: 3.62/4.00

Relevant Coursework

Algorithmic Composition, Parallel Computing, Computer Vision, Natural Language Processing and Reinforcement Learning, Social Choice Theory, Theory of Computation

WORK EXPERIENCE

Rymnet Solutions, Petaling Jaya, Malaysia

Senior Application Consultant

December 2023-Present

- Leading the development of an internal RAG system using LangChain to streamline ERP system troubleshooting and configuration, accelerating consultants' setup processes.
- Integrating a query-based solution with communication channels to analyze customer requests and inquiries in real time, automatically suggesting solutions to help the customer support team deliver faster and more accurate responses.
- Implementing customized management software modules for clients with head count ranging to sixteen thousand and guiding performance optimization for related SQL report queries.
- Coordinating the integration and testing efforts for third-party APIs into the system to enhance the learning platform functionality and streamline payroll management.

Jebsen and Jessen, Petaling Jaya, Malaysia

Software Automation Engineer

November 2022-March 2023

- Developed a task classifier, based on email context to classify, and delegate incoming non-intercompany emails into their respective workflow.
- Designed and tested additional features on the proprietary bank statements and general ledger matching tool to cover more varieties in posting.

NDA

Analyst

November 2021-November 2022

- Conducted fundamental market research on loan protocols and variable interest rates.
- Developed tooling to identify market movement based on public transactions and sentiment analysis.

Multimedia and Visual Computing Lab, Abu Dhabi, UAE

Research Assistant

May 2021-November 2021

- Researched models for point cloud segmentation and representation using deformable convolutions.
- Implemented variations of Kernel Point Convolutions and tested the effectiveness of combining them with other techniques.

Modern Microprocessors Architecture Lab, Abu Dhabi, UAE

Research Assistant

May 2020-August 2020

- Performed binary analysis on CODESYS 3.X binaries using Angr and Ghidra.
- Experimented with decompilation using a language translation model trained with the source and binary codes.

PROJECTS

Approximations for Covering in a Streaming Setting, Covering with Orthants

May 2020-May 2021

- Explored covering algorithms in a streaming setting for unit discs and their variations.
- Shows a lower bound for the square variation, a 2-approximation algorithm for the half-space variation with a hitting set of size 1, and a 1.5-approximation algorithm for the interval covering variation with a covergin set of size 2.
- Investigated the formation of cliques for connecting orthants

SKILLS

Languages: SQL, C++, Python, Javascript, VBA

Technical: Linux/Unix, Git, PowerBI, Bash, Pandas, NumPy, PyTorch, LangChain
